

Letter of Recommendation

As President of the Association of Civil Engineers of Cyprus, I am pleased to express my support for **BLUEBEAM** and to commend the high quality of its services in the fields of terrestrial laser scanning and BIM modelling.

Cyprus has a rich architectural heritage and a large number of historic buildings, many of which feature complex geometry, irregular surfaces and curved walls. Accurately documenting the existing condition of such structures presents a significant challenge for architects, designers and engineers. Traditional manual surveying methods can take weeks and inevitably involve the risk of human error.

Recently, **BLUEBEAM** demonstrated the capabilities of terrestrial LiDAR scanning technology on a historic building with complex architectural features. I was impressed by the speed, accuracy and efficiency of the work carried out. In just a few days, the company's specialists created a high-density point cloud with an accuracy of up to **2 mm** and prepared a complete set of high-quality digital documentation compatible with **AutoCAD**, **Archicad** and **Revit**.

A project that could have required several weeks of labour-intensive manual measurements and data processing using traditional methods was completed significantly faster and with a high level of technical accuracy.

This approach offers significant practical value to Cyprus's construction sector. It can substantially reduce the time required to collect existing-condition data, minimise the risk of errors and inaccuracies, and provide professionals with a reliable digital foundation for further design and engineering decisions.

I recommend **BLUEBEAM** to architects, engineers, designers and developers seeking to modernise their workflows and utilise accurate digital data of existing structures. The company demonstrates a high level of professionalism and can be a reliable partner in the digital transformation of Cyprus's construction industry.

Sincerely,

Kyriakos Tsioupanis

President of the Association of Civil Engineers of Cyprus
